1. INTRODUCTION

Since the meeting of the Board of Trustees of the IMDEA-Nanociencia Foundation last December, our Institute has started a wide variety of activities ranging from complementing our administrative staff to recruiting scientific personnel, designing the building and establishing agreements with different institutions, activities all of them directed to place our Institute in the future map of leading centres on Nanociencia at an international level.

Thus, the staff of the Institute has been working on establishing different institutional agreements, on the various aspects needed for the construction of the new building at the UAM campus, on selecting and hiring a number of scientists to be engaged with IMDEA-Nanociencia, a number that has been growing up moderately and, in any case, according to the current possibilities of available laboratories. In this regard, six scientists have been incorporated to the Institute as well as another five associate scientists (see report below).

In this period of time, the scientific productivity of our Institute has been quite satisfactory, with 4 papers published in 2007 and 31 papers came out along the present year, all of them in highly demanding impact factor journals. Furthermore, the scientific activity has also been spreaded to invited conferences, seminars and lectures given along the last year by scientists engaged to IMDEA-Nanociencia.

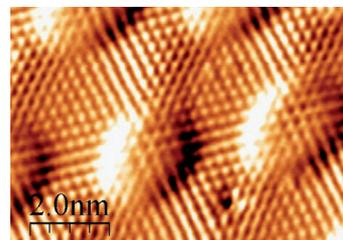

Other important aspect to be noted is the number of seminars at IMDEA-Nanociencia presented by highly recognised scientists coming from all over the world. These scientific activities, as well as the many events, workshops, courses, exhibitions, etc carried out, have resulted in a very intensive scientific activity within the framework of IMDEA-Nanociencia, as described in this report.
